SUMMARY

Applied Data Scientist with more than 3 years of experience across health data, clinical research, AI engineering (agentic workflows) and machine learning. Proficient in Python, SQL, SAS, R, and Git, with experience building reproducible pipelines, analysing large datasets and delivering practical insights.

KEY SKILLS

- Programming language and databases: Python, R, SQL, SAS, bash/shell scripting
- Machine learning and engineering pipelines: Supervised, unsupervised, deep learning, end-to-end pipelining, feature engineering, proficient in libraries such as Keras, TensorFlow, PyTorch, sklearn and LangChain.
- Tools and frameworks: Jupyter environments, workflow managers (Snakeflow and Nextflow), cloud platforms (GCP/AWS)
- Infrastructure and research-computing: Version control with Git and GitHub, Unix/Linux command line proficiency, proficient in executing and monitoring SLURM-based HPC and remote clusters.
- Communication: Strong ability to translate complex statistical outputs into actionable insights for diverse stakeholders.
- Agile/Team Fit: Collaborative mindset with a proven history of working cross-functionally to solve technical and domain-specific problems.

CAREER HISTORY

Data Analyst & Researcher

The THRIVE Project

June 2026 – Present

Supporting data-informed research and impact-oriented project work focused on social and environmental good. Contributing to research, analysis, documentation, and collaborative initiatives that translate information into practical insights for sustainability, wellbeing, and positive systems change. Engaging with project teams, training, and structured online workflows while building outputs that support THRIVE's mission and stakeholder-facing work.

Visiting Postgraduate Researcher (Data Science Workflows)

The George Institute for Global Health

July 2025 – Present

Supporting health data science research through reproducible Python, R, and SQL workflows for large-scale cohort analysis, data cleaning, harmonisation, feature engineering, QC, statistical modelling, and publication-oriented reporting. Translating analytical outputs into clear tables, visualisations, reports, and manuscript-ready results. Developed a multi-source UK Biobank harmonisation workflow for sex-specific multimorbidity analysis across 500,000+ participants, with manuscript preparation underway.

EMR Migration Data Analyst & Pharmacist

GMG Healthcare, Dubai, United Arab Emirates

January 2020 - October 2023

Supported the rollout of a central pharmacy CRM/EMR system across 60+ retail pharmacies while continuing frontline pharmacist duties. Worked with IT and pharmacy operations to map and migrate medication, pharmacy, and operational records, perform QA/QC checks, validate data quality, and track rollout progress. Contributed to the successful UAE-wide implementation of the new system within 3 months, supporting business continuity and faster operational adoption.

RESEARCH & PROJECTS

UK Biobank: Large-Scale ML Pipeline (Master's Thesis, The George Institute / UNSW): Engineered a scalable high-volume data processing pipeline with Python and SQL to extract, clean, and model complex records for a massive cohort of over 500,000 participants. Executed resource-intensive machine learning and statistical workflows on remote SLURM-based HPC clusters. Strictly utilised Git version control to guarantee a fully reproducible and auditable codebase for production handover.

A Novel Approach to ICU Analytics and Patient Risk Stratification (MAIP): Built an interactive healthcare analytics project focused on ICU patient data exploration, risk stratification, and clinical insights. Developed visual summaries and data-driven outputs to support understanding of patient patterns, outcomes, and potential decision-support use cases.

Link: <https://hsreedeth.github.io/ICUAnalytics/>

hERG Cardiotoxicity ML Safety Study: Evaluated two architectures., a graph neural network (D-MPNN) and a fingerprint-based classifier (XGBoost). Developed a molecular machine learning pipeline focused on hERG-related cardiotoxicity prediction, model evaluation, and interpretable drug safety analysis. The project demonstrates applied cheminformatics, feature engineering, predictive modelling, and research-oriented reporting for early drug safety screening.

EDUCATION

University of New South Wales, Sydney

Master of Science in Health Data Science (Extension), 2024 – 2025 • Graduated with Distinction average.

Gulf Medical University, UAE

Doctor of Pharmacy, 2014 – 2019 • Graduated with 3.49 GPA.
